Directions For Use

Pro-Carb-N 10-0-0 is compatible with liquid fertilizers, micronutrients, pesticides, and water. The addition of Pro-Carb-N to these products should not be undertaken without first testing compatibility on a small scale. When mixing with water, use a ratio of 1 gallon of Pro-Carb-N to every 9 gallons of water. This is applied prior to the addition of buffering agents and pesticides. Mix and agitate thoroughly. DO NOT tank-mix with carbonate-based pesticides, as this will result in significant decreases in efficacy. Follow all directions on pesticide labels prior to mixing with Pro-Carb-N.

General Application Rates*

Vegetable, Fruits, Ornamentals, and Row Crops **1-2 Gallons per Acre**

Golf, Turf and Sports Fields **3-6 oz. per 1,000 sq. ft.**

**up to 5 applications per season, i.e. 10 gallons per acre*

Disclaimer:

This product may not be available for purchase or authorized for use in every state. In addition, some states, counties, and cities may require special licensing and training to sell, purchase or apply the product presented on this label. It is the responsibility of the distributor, retailer or professional applicator to verify (prior to sale/purchase) that the product is approved for use intended in their city, state and county. **Not for use in organic crop and organic food production.**

CAUTION:

When combining with aqueous ammonia, vapor releases may result in pressure build-ups. For such mixtures, only use mixing and application equipment that are vented and/or have pressure release valves.
